
CIPROSET

Composition:

Each ml injection contains Ciprofloxacin USP 50 mg (as Hydrochloride).

Mode of Action:

Ciprofloxacin is one of the most active fluorinated quinolones. Ciprofloxacin is active against both gram-positive and gram-negative bacteria. Ciprofloxacin blocks the functions of DNA gyrase which is essential for the synthesis of DNA nucleic acid.

Indications:

For the treatment of the respiratory infection caused by Actinobacillus, Pasteurella, Streptococcus, Bordetella and the diarrhea disease caused by E.coli, Salmonella susceptible to Ciprofloxacin.

Dosage & Administration: For intramuscular injection-

Cattle: 1 ml per 10 kg body weight for 3-5 days.

Calf, Goat: 1-2 ml per 10 kg body weight for 3-5 days. Or as directed by the Veterinarian

Contraindications:

Contraindicated in those animals, which have hypersensitive to Ciprofloxacin.

Side Effects:

At the recommended dose, side effects are rare and mild.

Precautions:

Do not mix with other antibiotics.

Storage:

Store in a cool & dry place, protect from light and keep all medicine out of reach of children.

Presentation:

Each single pack contains 10ml, 50ml & 100ml vial.
